

Gapstars Senior Software Engineer Technical Assessment

Backend

Backend is done with Laravel.

Running the code

1. Create a local database with the provided SQL file in the backend directory.
2. Add the related database environment variables to the .env
3. Put the backend directory in apache / nginx directory, then change directory into the backend and run `composer install`
4. Or run `composer install` then `php artisan serve`

Frontend

Frontend is done with Vue.JS.

Running the code

1. Change the directory into frontend and run `npm install`
2. Then run `npm serve`
